## Native Lands and Mapping

*Recommended for Adults*

Maps show how the cartographers and the group they represent see land. In the Western sense, it can show which entity has ownership of land and rights to natural resources. It can also show land open to settlers. In United States history, maps and the concept of Manifest Destiny were used for colonization purposes, which forced removal of many Native peoples from their tribal lands, justified acts of persecution against them, and laid ground to treaties and legal acts that purposefully diminished Native land and natural resource rights.

To decolonize history and add more Native perspectives, Native communities, historians, and cartographers are highlighting traditional Native maps such as traveling songs, the Catawba Deerskin map, and the Tlingit Map of 1869. Some have even created new maps to outline the boundaries of Native territories before colonization as well as to map out the world around them.

In recent years, various community leaders and institutions have included land acknowledgements in their events, websites, and email signatures. They acknowledge the indigenous peoples as the original caretakers of the land. While this does help bring awareness that Native peoples are still here today, some say it is not enough to rectify the past persecutions and genocide that still affects today's Native generations.
